

ONCHAIN LOYALTY PROTOCOL · BASE MAINNET

Loyal Spark

Onchain loyalty rewards for SMBs — operated by **humans and AI agents.**

Programs you own. Tokens customers truly hold. APIs agents can pay for.

Built on Base

USDC-native

Agent-ready (REST + MCP)

loyalspark.online

Pitch deck · July 2026

Loyalty is stuck in the last century

Traditional programs are expensive for businesses, worthless for customers, and closed to automation.

Expensive for merchants

Legacy SaaS charges **\$99–499/mo** or takes **15–30%** of program revenue.

Customers don't own points

Points live in someone else's database — they can be devalued, expired, or revoked with no recourse.

Closed to agents

Programs are siloed with no API for AI agents and machine payments — the fastest-growing commerce channel.

Dual-mode loyalty platform

One protocol, two interfaces: humans use the portal; AI agents use API and MCP. Shared contracts, tokens, and database.

Own your program

Deploy your ERC-20 loyalty token on Base. Mint, transfer, and redeem onchain.

Pay per use

Predictable USDC SaaS plans. No revenue cut. No hidden lock-in.

Automate with agents

AI agents run programs via REST + MCP, paying per call with x402 / MPP micropayments.

Large and under-served

630,000+

SMBs running loyalty programs in the US alone

\$100B+

in loyalty rewards issued and never redeemed each year

04 · MARKET SIZE

Loyalty SaaS + AI-agent commerce

\$200B+

TAM — global loyalty (SaaS + points liability)

\$60B

SAM — SMB & mid-market digital loyalty

Pre-revenue

Live MVP on Base, onboarding first design partners

Two portals + one programmable API

Merchant flow

1

Deploy

Create ERC-20 loyalty token on Base in minutes

2

Run

Mint by email/phone/wallet, vouchers, tiers, RFM, automation

3

Scale

Branches, staff, AI agents with scoped API keys

Customer flow

1

Receive

Tokens land in a smart wallet (Privy / SIWE) — no crypto expertise needed

2

Redeem

Spend on rewards or swap P2P via onchain escrow

3

Own

Tokens stay in the customer's wallet, fully transferable

Two revenue axes + mint fees

Merchant SaaS (USDC on Base)

Starter	\$39 / mo	Portal, programs, CRM-light
Growth	\$79 / mo	Analytics, more seats
Scale	\$149 / mo	Enterprise budgets, priority

AI agents (API + MCP)

Free	\$0	200 calls · 1.25% mint fee
Pro	\$49 / mo	10,000 calls · 0.50%
Enterprise	\$129 / mo	Unlimited · 0.25%

Pay-per-call (x402 / MPP): from ~\$0.001 per read, ~\$0.005–0.05 per write — USDC on Base, no API key required.

Land humans first, then unlock agents

PHASE	TARGET	FOCUS
Now	First design partners	Onchain loyalty + dashboard on Base
Q3–Q4 2026	10–25 paying merchants	Starter/Growth plans, case studies
Q1–Q2 2027	100+ merchants	Agent channel: OpenServ, MCP catalogs, x402
H2 2027	500+ merchants	Multi-region SaaS + agent revenue

Legacy loyalty vs Loyal Spark

Traditional platforms

- ✗ Square Loyalty: \$45–105/mo per location
- ✗ LoyaltyLion / Yotpo: \$200–700+/mo
- ✗ Smile.io: revenue-share & per-order fees
- ✗ Closed APIs, no native AI-agent access
- ✗ Points are a database row — no true ownership

Loyal Spark

- ✓ Predictable USDC SaaS from \$39/mo
- ✓ ERC-20 tokens — customers truly own them
- ✓ Agent-ready: REST + MCP, x402 / MPP
- ✓ SIWE & Privy — no passwords, no email leaks
- ✓ P2P escrow marketplace between programs

What makes us defensible

Dual-mode

Humans (portal) + AI agents (API + MCP) in one protocol.

Two-bill model

Merchant SaaS + agent API + mint fee % — diversified revenue.

HTTP 402 payments

Native x402 / MPP — positioned for the agent economy.

Built on Base

Low fees, fast finality, USDC-native — Coinbase ecosystem.

Hardened security

RLS, SIWE, scoped `lsk_` / `rwk_` API keys, full audit trail.

Open standards

OpenAPI, agent.json, MCP catalogs (Glama, Smithery, OpenServ).

Live product, not slides

Live MVP

Deployed on Base Mainnet (Chain ID 8453)

Web · PWA

Capacitor 8 — iOS / Android scaffold

25 REST

+ 36 merchant MCP tools (+ 18 recipient MCP)

Privy + SIWE

Scoped API keys · Builder Code ERC-8021

Production contracts: **LoyaltyTokenFactory** 0x5F3D...dA80 · **LoyalSparkERC20** 0xe6BA...27C3. Stage: pre-revenue, onboarding design partners.

THANK YOU

Let's make loyalty **programmable**

Opening onchain loyalty to the next 50 million SMBs — and the AI agents working alongside them.
